

BACnet Batch Scheduler

The software solution allows Systems to modify BACnet Schedules via an Access DBS.

With the fully featured driver cyclic monitoring of the access DBS allows the solution to modify BACnet Device schedules on the building automation system.

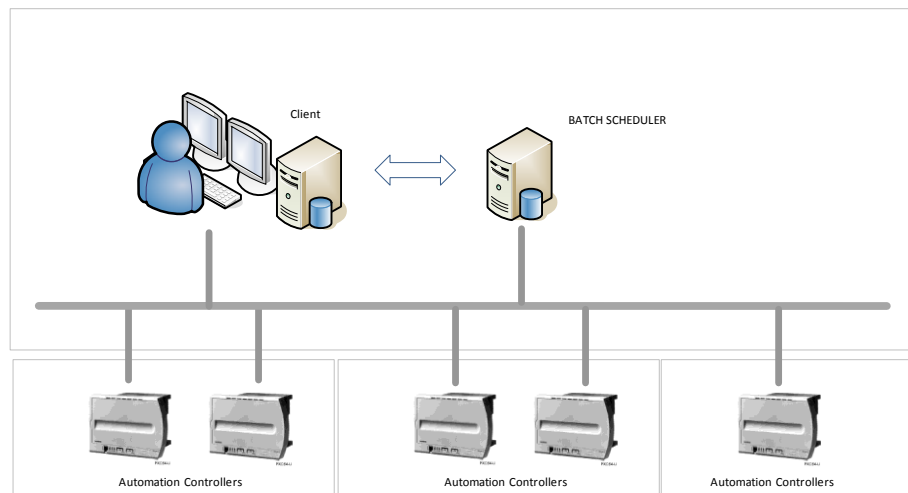

The software driver comes complete with a dynamic event monitor and a simple engineering process.

Features and functions

BACnet Batch Scheduling

The BACnet Batch Scheduler monitors the Access DBS for valid and current schedules.

BACnet Interoperability Objects

The BACnet Batch Scheduler writes to BACnet Weekly Schedule Objects. Each Weekly Object will be updated with the daily schedules, each daily schedule comprising of Switching Times and Values.

Engineering

The Software application uses a structured Access DBS to define the Device information and the Time schedules required. In this way a simple and effective Batch modification of the Weekly BACnet schedules is possible.

Windows service

The Software runs as a windows service.

BACnet Client

The BACnet settings such as Network Number and Device Number can be modified to suit the requirements.

System and Device Dynamic Event Logging

The Application includes a dynamic generation of Events that can be logged and saved.

Software Solution Pack

The Software is delivered as a Software solution pack, comprising of a CD with the latest Documentation and Installation Files plus a USB License Dongle.
