

Integrated Crestron AMX OPC Client

The Software application allows Crestron and AMX Systems to connect to a multitude of OPC Servers.

With a simple engineering process the product allows Crestron and AMX systems to connect to Air-conditioning, Access, Fire, Security, Lighting, Metering and a host of other systems that offer OPC Servers.

Features and functions

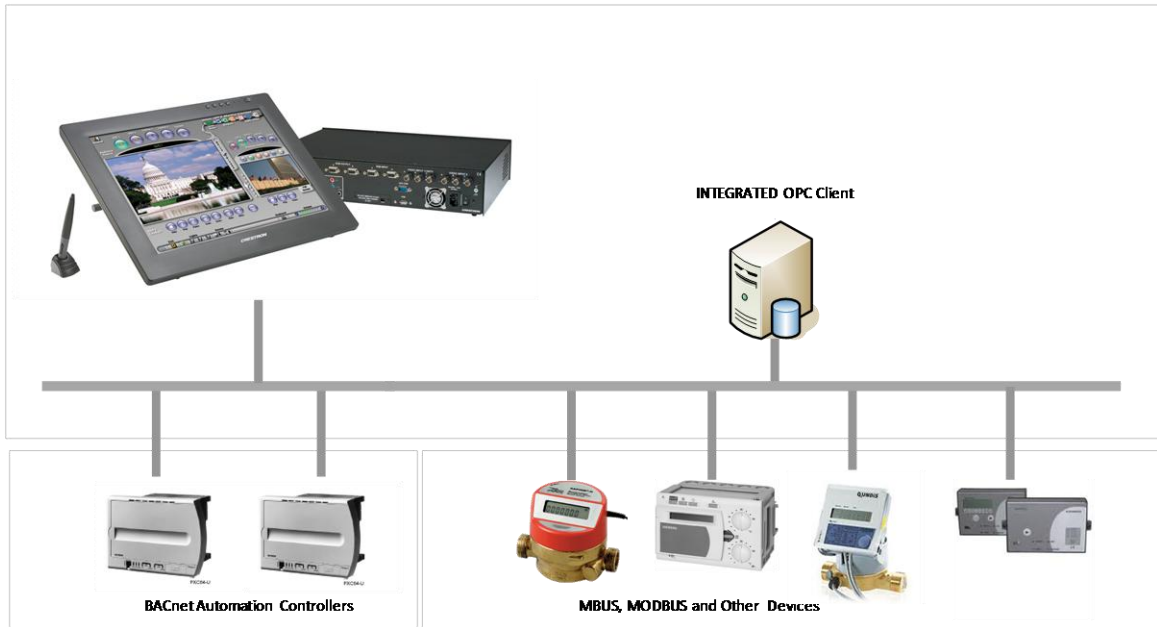

- **Crestron AMX Interface**
The Software application uses a TCP/IP connection to receive requests and commands from the Crestron or AMX Systems. Requests from the Crestron or AMX are answered back with the value and quality flag, Commands are answered back with a confirmation of the command
- **OPC Server supported functions**
The OPC Server supports DA version 2.0a and browser functions.
- **Engineering Process**
The Software application uses a very efficient import or browsing process to allow the engineer to quickly and simply gain communications to their devices.
- **Connectivity**
The Product can connect to OPC Servers for disciplines such as Air-conditioning, Access, Fire, Security, Lighting, Metering and many other systems that offer OPC Servers.
- **System and Device Status**
The Application includes the ability to retrieve the system state of the client interface and the connection to the OPC Server.
- **Logging facility**
In order to ensure recorded information, a logging facility is included with the solution. This feature can be enabled or disabled as required.
- **Windows Service Operation**
The application runs as a windows service with a sub application running in the System Tray with an icon representing the system state.
- **More information**
Simply visit our web site www.integrated.ch for access to our demo version software; datasheet, engineering guidelines and configuration file plus links to other relevant software drivers.
- **Smarthome Licensed Product**
The product is available from Smarthome SA, Gland, Switzerland.

Product Notes

Product Specification Summary

The OPC Client software solution supports DA 2.0a, 3.0 and browser functions
The solution was developed and tested by INTEGRATED for Smarthome SA, Gland, Switzerland.
